

# Voiceweb: Voice-Driven Smart Internet on Blockchain

## The Voiceweb Intelligent Network

Voiceweb is a voice-driven, decentralized smart internet based on Voicechain, an universal bridge between chatbot and IoT. Mr. Jianwen Zhao, founder and CEO of Voiceweb Ltd., the inventor of fundamental mobile instant messaging technology and the original creator of WeChat's IP, is about to bring disruptive changes to the traditional internet industry again!

## Open, Decentralized, and Intelligent

Connecting billions of smart IoT devices and chatbots via blockchain.

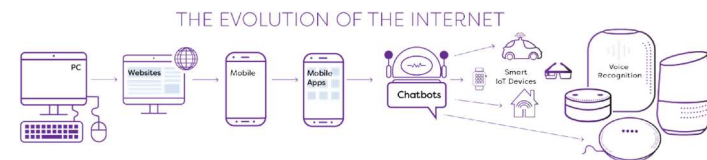

## Challenges and Opportunities

Masayoshi Son predicts that 30 years from now, 10 billion bots will co-exist with humans. However the chatbots associated with Facebook Messenger and Telegram instant messaging platform, as well as the Voice Chatbots built into Amazon, Google and Apple Voice Assistant's private networks, have no globally unique identity, and have zero interoperability with each other.

The Internet giants have monopolized the resource of voice chatbots, and the absence of integration has distressed small and mid-sized voice hardware manufacturers. Users who have purchased smart speakers are apprehensive about this lack of content; developers struggle to adapt to the multiple standards associated with the different platforms.

In the upcoming post-mobile era, the traditional World Wide Web simply has no role in screenless IoT devices, and the traditional IM platform will lose its competitive advantage in the transition and decentralization beyond the screen and blockchain.

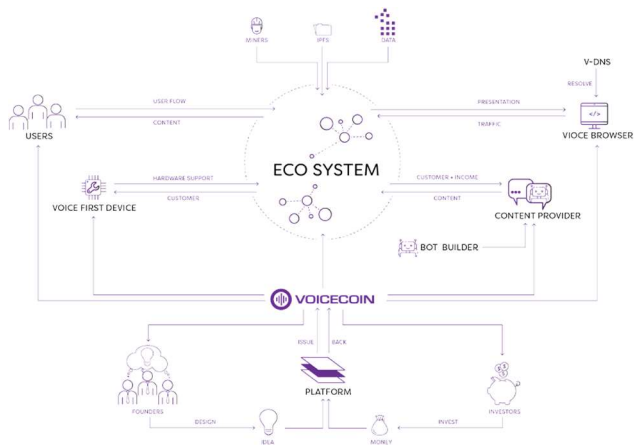

## Voiceweb - The Voice Internet Solution

In accordance with the decentralization concepts and open spirit of the legend World Wide Web, Voiceweb is constructed using blockchain technology to register and connect intelligent conversational services on a global scale. End users use the BS model instead of the CS model to carry on a dialogue with intelligent bots. The existing problems in the AI industry of high coupling, high cost, low efficiency, lack of content, and difficulty in cross-platform integration will be resolved. Users, authenticated through voice, will explorer mass conversational services, achieve high-efficiency global payment via voice, and enjoys the next generation Internet life: smart IOT conversation and surfing.

## Ecosystem and Operating Model

The Voiceweb smart blockchain employs Voicecoin (abbreviated as VC) as its token to promote the value distribution and ecological cultivation of the entire ecosystem, to stimulate the innovation and vitality of intelligent conversational services, and service developers, hardware manufacturers, end users, and browser software companies.

## Founder Introduction:

**Jianwen Zhao**, a serial entrepreneur and Internet expert, creator of mobile messaging patent used by popular applications with 3 billion+ users, honored as the inventor of fundamental mobile instant messaging technology and WeChat IP.

## Pre-Sale Plan

The legal entity that runs Voiceweb, Voiceweb Foundation, has already satisfactorily completed regulatory formalities and has won praise from a number of senior industry experts in the ChainQA interview. It is about to kick off Pre-Sale soon.
